## Multiple File Upload in PHP using DropzoneJS – Drag and Drop

By [WebRewrite](#) | [Javascript](#), [PHP](#) Last Modified on December 24, 2015

How to create drag and drop multiple file upload in PHP using DropzoneJS. In this tutorial you'll learn about how to build multiple file upload feature using DropzoneJs.

➔ **Drop files** to upload  
(or click)

[DropzoneJS](#) is highly customizable, an open source library that provides drag'n'drop file uploads with image previews.

In this tutorial, i'll show you how to use DropzoneJs to create nice drag and drop file upload feature.

## Create Drag and Drop Multiple File Upload using DropzoneJS

To use [DropzoneJS](#) first download and include it's CSS and Js.

[Download Dropzone js](#)

[Download CSS file](#)

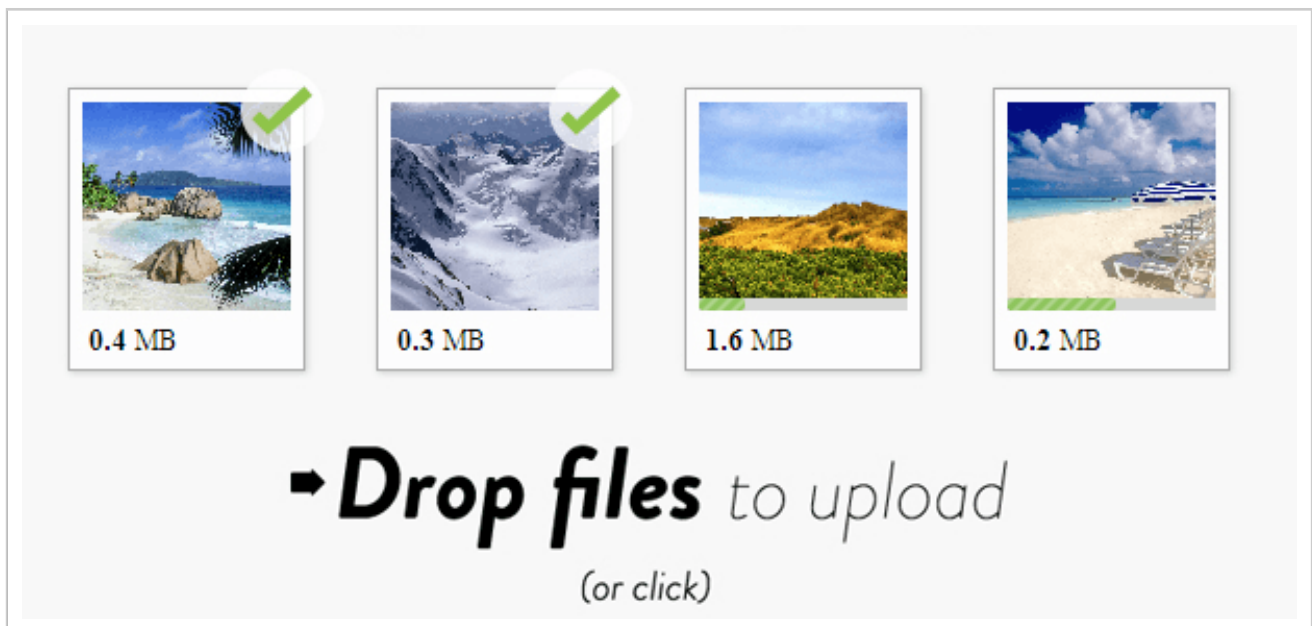

Now let's create a form and you are done. For using this library you just need to write minimal code and rest everything is included by DropzoneJS.

```

1 <form action="example.php" method="post" class="dropzone" id="my-awesome-dropzone"
2
3   <div class="dropzone-previews"></div>
4
5   <div class="fallback">
6     <input name="file" type="file" multiple/>
7   </div>
8
9 </form>
10
11 <button type="submit" id="submit-all" class="btn btn-primary btn-xs">Upload the fi

```

We have written the html code. Let's write [PHP](#) code to handle multiple upload as this library doesn't handle server-side implementation. This short PHP snippet upload the file in images folder. You can upload this file in any folder you want.

```
1 // Multiple file upload
2
3 foreach($_FILES['file']['name'] as $index=>$name){
4
5     $filename = $name;
6
7     if(!file_exists("images/".$filename)){
8
9         move_uploaded_file($_FILES["file"]["tmp_name"][$index], "images/
10
11     }
12
13 }
```

[Learn PHP Programming Online : Video Tutorials .](#)

DropzoneJS is highly customizable so you can easily customize it's behaviour.

```
1 <script type="text/javascript">
2
3 // The camelized version of the ID of the form element
4
5 Dropzone.options.myAwesomeDropzone = {
6
7 // set following configuration
8
9     autoProcessQueue: false,
10     uploadMultiple: true,
11     parallelUploads: 10,
12     maxFiles: 10,
13     addRemovelinks: true,
14     previewsContainer: ".dropzone-previews",
15     dictRemoveFile: "Remove",
16     dictCancelUpload: "Cancel",
17     dictDefaultMessage: "Drop the images you want to upload here",
18     dictFileTooBig: "Image size is too big. Max size: 10mb.",
19     dictMaxFilesExceeded: "Only 10 images allowed per upload.",
20     acceptedFiles: ".jpeg,.jpg,.png,.gif,.JPEG,.JPG,.PNG,.GIF",
21
22 // The setting up of the dropzone
23
24 init: function() {
25     var myDropzone = this;
26
27 // Upload images when submit button is clicked.
28
29 $("#submit-all").click(function (e) {
30     e.preventDefault();
31     e.stopPropagation();
32     myDropzone.processQueue();
33
34 });
35
36
37 // Refresh page when all images are uploaded
38
39 myDropzone.on("complete", function (file) {
40     if (myDropzone.getUploadingFiles().length === 0 && myDropzone.getQueuedFil
41     window.location.reload();
42     }
43 });
44
45 }
```

```
46
47  }
48
49
50  </script>
```

Check complete [DropzoneJS configuration](#) and customize them as per your need.

## Conclusion

I have used DropzoneJS library for creating multiple file upload feature and found to be great in terms of UI, customization and everything. If you want to add something please let me know through comments.
